Greenstone: Open source Software for Building Digital Library Collections

Dr. M.G. Sreekumar
UNESCO Coordinator, Greenstone Support, South Asia
Librarian & Head, CDDL, IIM Kozhikode
The Wonderful Open Source World
What is open source software?

- In the phrase *open source*, *source* refers to source code, the human-readable computer code which is the origin, or source, of the computer application.
- *Open* refers to the terms of access to that computer source code.
- So *open source* software is software for which the source code is freely available.
General Platforms / Applications

OSs
- Linux
- BSD

Web Servers
- Apache
- Java apps

Server-Side Scripting
- LAMP, WAMP, MAMP
- Tomcat
- Cocoon
- Ant
- SRU/SRW

Web Services
- Tomcat
- Cocoon
- Ant
- SRU/SRW

MLs
- 1992+

RDBMS
- MySQL
- PostgreSQL
- mSQL

Prgm Langs
- Perl
- PHP
- Python

Applications
- Emacs
- grep
- sendmail
- ssh

Img Processing
- IMageMagick

OAI

Net/Web Security

Mobile Computing
- WML
- WAP
- WiFi

General Platforms / Applications
Advantages and Disadvantages

**Advantages**

- Mostly issued under an internationally accepted License
- Access to source code *and ability and right to modify it*
- Right to redistribute modifications to benefit wider community
- Free
- Excellent support networks
- Large and enthusiastic user base

**Disadvantages**

- Limited or no accountability
- Informal and unaccountable support channels
About Greenstone

Greenstone is a suite of software for building and distributing digital library collections. It provides a new way of organizing information and publishing it on the Internet or on CD-ROM. Greenstone is produced by the New Zealand Digital Library Project at the University of Waikato, and developed and distributed in cooperation with UNESCO and the Human Info NGO. It is open-source, multilingual software, issued under the terms of the GNU General Public License. Read the Greenstone Factsheet for more information.

The aim of the Greenstone software is to empower users, particularly in universities, libraries, and other public service institutions, to build their own digital libraries. Digital libraries are radically reforming how information is disseminated and acquired in UNESCO’s partner communities and institutions in the fields of education, science and culture around the world, and particularly in developing countries. We hope that this software will encourage the effective deployment of digital libraries to share information and place it in the public domain. Further information can be found in the book How to build a digital library, authored by two of the group’s members.

The complete Greenstone interface, and all documentation, is available in English, French, Spanish, Russian and Kazakh. Greenstone also has interfaces in many other languages. We are looking for volunteers to add new language interfaces and help maintain existing ones.

What is the Greenstone software?

- Software suite for building, maintaining, and distributing digital library collections
- Comprehensive, open-source
- Developed by New Zealand Digital Library Project at the University of Waikato
- Distribution and promotion partners:
  - UNESCO
  - Human Info NGO, Belgium
  - NCSI, Bangalore; UCT, Cape Town; Dakar, Senegal; Almaty, Kazakhstan; …
  - You!
Humanity Development Library
for sustainable development and basic human needs

- 160,000 pages
- 30,000 images
- 800 books
- 430 magazines
- 340 kg
- US$20,000
- CD-ROM
- US$1
- Fully searchable
- Win3.1x upward
- Stand-alone + intranet server
- Web browser user interface

Global Help Project, Antwerp (+ UN agencies)
Features of Greenstone

- Open Source Philosophy
- Interfacing & Content Delivery via Web
- Multi S/W Platform
- Multi Lingual Support
- Multi Formats
- Structured Metadata in XML using DC
- Metadata Extraction
- Searching & Browsing
- Plug-ins for Documents

- Full-text mirroring
- Text Level Penetration
- Data Compression
- Password protection
- Administrative Functions
- Concurrent & Dynamic Content Development
- Uniform Presentation
- Publishing on CDROMs
- International Presence
Greenstone Features contd...

- Easy Installation
- Easy Maintenance
- Content Development (3 alternate ways)
- Predominantly GLI now - since (V. 2.41)
- Hierarchy Structure
- Interface Customization
  - Front Page Design, Header for the Digital Library, Collection Icon, Cover Images
- Collection Configuration (Collect.cfg) File
- Scalability, Flexibility
- Interoperability (Crosswalk), OAI Compliance
- Lifeline: Listserv / E-Group / Archives / Wiki
UNESCO: Distributing Greenstone DL software

Sustainable development

“Give a man a fish, feed him for a day
Teach a man to fish, feed him for life”

Greenstone software on CD-ROM

- GNU licensed
- Fully documented ... in English/ French/ Spanish/ Russian
- Language interfaces: Arabic Chinese Czech ... Thai Turkish
- Unix/ Windows/ Mac OS-X
- Trivial to install
- GUI interface for gathering, enriching, building ...
- Serve collections on Web or write them to CD-ROM
- Document formats: HTML, Word, PDF, PS, plain text, e-mail
- Metadata formats: XML, DC, OAI, MARC, ...

download from http://greenstone.org
What we wanted

- “Collections” of digital material
- Individualized, depending on metadata etc
- Up to several GB of text …
- … + associated images, movies, whatever
- Fully searchable
- Served on WWW, or published on CD-ROM
- Multi-platform (Unix + all Windows + Mac)
- Multi-format documents and metadata
- Multi-lingual: documents and interfaces
- Multimedia
- Metadata: standard and non-standard

The power of open source: Greenstone uses ...

- **Ghostscript** Interpreter for Adobe Postscript documents (Postscript plugin)
- **Kea** Keyphrase extraction program (to generate metadata)
- **pdftohtml** Converter for PDF documents (PDF plugin)
- **rtftоhtml** Converter for RTF documents (RTF plugin)
- **TextCat** Detects languages and document encodings
- **wvWare** Converter for Word documents (Word plugin)
- **Xlhtml** Converter for Excel/Powerpoint documents (plugins)
- **XML::Parser** Parses XML documents, used to read and write Greenstone’s internal XML document format
and …

- **MG** Creates compressed full-text indexes and performs searches
- **GDBM** Database used for metadata etc
- **wget** Downloading pages from the Web when creating collections
- **YAZ** Client and server implementation of Z39.50
- **Stemmer** English language stemmer

- **GCC** C/ C++ compiler
- **CVS** Version control system
- **Perl** Used for plugins etc
- **Apache** Web server used by many Greenstone installations
- **OAI-PMH** OAI Performance
Example Greenstone collections

- Rapid growth in use
- International – Many Countries...China, Germany, India, UK, USA, Russia, Malaysia, Singapore... – Almost all countries/Continents
- Increasing activity on Greenstone mailing list
- Promotion by UNESCO – “deployment of DL’s for sharing public domain information”
- Wide variety of DL collections have been developed in several languages
  - historical, educational, cultural, and research
New York Botanical Garden

- Rare 19th century works on American trees
- Gorgeous full-color plates

UNESCO - SAHEL point DOC - CD-ROM 1.0

Ce CD-Rom SAHEL point DOC, première publication de la collection PUBLICA de l'UNESCO, met à la disposition du public, un choix de documents d'informations utiles et disponibles en langue française sur le développement du Sahel. Plus de 12 000 pages de documents y ont été reparties en cinq thèmes que vous pourrez découvrir sous le bouton "sujets".

Comment trouver les informations ?

AIDE: Pour de l'aide à tout moment, activez le bouton "Aide".

Il y a cinq manières d'accéder aux informations contenues dans ce CD-ROM:

- rechercher des mots particuliers ou une phrase
- accéder aux publications par sujet
- accéder aux publications par titre dans l'ordre alphabétique
- accéder aux publications par organisation
- accéder aux publications par le bouton

Greenstone Digital Library

Greenstone is a state of software for building and distributing digital library collections. It provides a new way of organizing information and publishing it on the Internet or on CD-ROM. Greenstone is produced by the New Zealand Digital Library Project at the University of Waikato, and developed in cooperation with UNESCO and the Human Info NGO. It is open-source software, available from http://greenstone.org under the terms of the GNU General Public License.

The aim of the software is to empower users, particularly in universities, libraries, and other public service institutions, to build their own digital libraries. Digital libraries are radically reforming how information is disseminated and acquired in UNESCO’s partner communities and institutions in the fields of education, science and culture around the world, and particularly in developing countries. We hope that this software will encourage the effective deployment of digital libraries to share information and place it in the public domain.

This software is developed and distributed as an international cooperative effort established in August 2000 among three parties.

New Zealand Digital Library Project at the University of Waikato

Greenstone software grew out of this project, and this initiative has been endorsed by the Communication Sub-Commission of the New Zealand National Commission for UNESCO as part of New Zealand’s contribution to UNESCO’s programme.

Running the Greenstone Librarian Interface...
Version: 2.83

User cache dir: C:\Documents and Settings\MSREE\Application Data\Greenstone\GLI\cache\
GLI Functions

- Establish new collection (or work on old)
- Select files to include in collection (Gather)
- Enrich files with metadata (Enrich)
- Select Plugins, Indexes, Classifiers (Design)
- Build Collection (Create)
- Format and Control Display (Format)
- Customize Appearance
- Preview Collection
GLI

- Building collections
- Interactive Java program
- Runs on anything
- Build a collection on the computer you are on
- … plus new applet version
- Includes metadata editor

- Caveat: cannot deal with such huge collections as Greenstone can (particularly of metadata)

- Invoke GLI: build a small collection of HTML files
- Gather
- Create
- Look at extracted metadata
- Set up shortcut in the Librarian interface
Collection Building…

- Greenstone used to have three modes of collection building, viz., **Command Line**, **Web Interface** and the **GLI** (Greenstone Librarian Interface)
- Progressing with version 2.4x., the GLI got strengthened as well as popularized
- Web Interface mode has been withdrawn temporarily.
- The GLI based collection building is quite easy and simple a method.
- Collection developers can activate the GLI software and use the ‘**Gather**’, ‘**Enrich**’, ‘**Design**’, ‘**Format**’ and ‘**Create**’ panel for making collection
Collection Building

- Input: a set of source documents
- Possibly in many different formats
- Greenstone “imports” these documents and converts them to its own internal (GA) format
  - Extracts as much metadata as possible
- Greenstone “builds” indexes and browsing structures using the GA files
- Start with a few documents, get the design right, then add the bulk of the documents
Building a New Collection

In GLI, Go to File, Select New and Say “Multimedia” and base it to New
Building a New Collection

In Gather, Browse Files From Workspace & Drag-Drop to Collection Area
The file C:\Program Files\Greenstone\collect\multimed\tmp\beatles1.html is being processed by HTMLPlug.

Greenstone is a suite of software for building and distributing digital library collections. It provides a new way of organizing information and publishing it on the Internet or on CD-ROM. Greenstone is produced by the New Zealand Digital Library Project at the University of Waikato, and developed and distributed in cooperation with UNESCO and the Human Info NGO. It is open-source software, available from http://greenstone.org under the terms of the GNU General Public License.

The aim of the software is to empower users, particularly in universities, libraries, and other public service institutions, to build their own digital libraries. Digital libraries are radically reforming how information is disseminated and acquired in UNESCO’s partner communities and institutions in the fields of education, science and culture around the world, and particularly in developing countries. We hope that this software will encourage the effective deployment of digital libraries to share information and place it in the public domain.
This new version of MG (MG plus plus) was developed by the New Zealand Digital Library Project. It does word level indexing, which allows fielded, phrase and proximity searching to be handled by the indexer. Boolean searches can be ranked. Only a single index file is created for a Greenstone collection: document/section levels and text/metadata fields are all handled by one index file. For collections with many indexes, this results in a smaller collection size than using MG. For large collections, searching may be a bit slower due to the index being word level rather than section level.
This is the original indexer used by Greenstone, developed mainly by Alistair Moffat and described in the classic book Managing Gigabytes. It does section level indexing, and searches can be boolean or ranked (not both at once). For each index specified in the collection, a separate index file is created. For phrase searching, Greenstone does an "AND" search on all the terms, then scans the resulting hits to see if the phrase is present. It has been extensively tested on very large collections (many GB of text).
Lucene was developed by the Apache Software Foundation. It handles field and proximity searching, but only at a single level (e.g., complete documents or individual sections, but not both). Therefore document and section indexes for a collection require two separate index files. It provides a similar range of search functionality to MGPP with the addition of single-character wildcards, range searching and sorting of search results by metadata fields. It was added to Greenstone to facilitate incremental collection building, which MG and MGPP can't provide.
A (slightly) enhanced collection - Multimedia

Add plugin
- UnknownPlug, set to accept MIDI files

Add metadata
- for “browse” button (8 items)
- for image titles (14 titles)
- to correct misspelling (mistery) (1 item)

Add/modify classifiers
- modify to display dc.title or ex.title
- add one for “browse” button
- remove the one for filename
- add one for phrase index
- add regular expressions to clean up titles

Modify format statements
- show title only for cover images
- suppress text document icon for MP3/MIDI items
- make bookshelves show how many documents they contain

General
- assign collection icons
- assign icons for non-standard media types: lyrics, discography, etc

About this collection

Demonstration collection illustrating the use of heterogeneous documents. Source document are about The Beatles pop group in the following formats: HTML, TXT, JPEG, Word, PDF, MIDI, MP3, and MARC file formats.

How to find information in the dbbeat_large collection

There are 4 ways to find information in this collection:
Customization

- Greenstone is specifically designed to be highly extensible and customizable.
- New document and metadata formats are accommodated by writing "plugins" (in Perl).
- Analogously, new metadata browsing structures can be implemented by writing "classifiers."
- The user interface look-and-feel can be altered using "macros" written in a simple macro language.
- A Corba protocol allows agents (e.g. in Java) to use all the facilities associated with document collections.
- Finally, the source code, in C++ and Perl, is available and accessible for modification.
Customizing with macros

- Let you customize presentation
- Present pages in different languages
- Print variables into the page text
  (e.g. number of search hits)

- **Macro files**
  - stored in `greenstone2/macros` folder
  - each file defines one or more “packages”
    (A “package” is a group of macros)
  - loaded on startup
    (note difference between Local and Web Library)
  - listed in `etc/main.cfg`

- **Collection-specific macros**
  - Stored in `greenstone2/collect/mycol/macros/extra.dm`
  - Or include argument `[c=collectionname]` for each macro
Personalizing your home page

C:\ Program Files\ gs2\ etc\ main.cfg  change home.dm to yourhome.dm

Greenstone Support for South Asia has been launched

The Greenstone Digital Library Software (http://www.greenstone.org) is an Open Source package for building and distributing Digital Libraries which has been developed by the University of Waikato, New Zealand. Greenstone is supported by the UNESCO and the Human Info NGO Belgium for spreading the benefits of this software to developing countries. Greenstone is a powerful and flexible software which is of great potential interest to libraries and information centers and other public and private institutions in South Asia.

This support effort is coordinated by the CDDL at IIM Kozhikode in collaboration with the Greenstone development team in order to ensure effective promotion and support for Greenstone in South Asia.

Workshops Coordinated by Greenstonesupport, IIMK
Acknowledgement

- Prof. Ian Witten, Director, Greenstone Digital Library Project, University of Waikato, New Zealand
- Team Greenstone, New Zealand
- Greenstone Support South Asia
- IIM Kozhikode, India
- UNESCO
Thank you
